ning of each regular issue of the PCT Gazette.*

(54) Title: DATA PROCESSING APPARATUS

(57) Abstract: Data processing apparatus (101 and 102) configured to receive signals from an input sensor (106) arranged to dupli-
cate or replace operations of a keyboard, in which the signals correspond to positions of mechanical interactions with the sensor (106).
The apparatus comprises processing means (1202) configured to process data derived from the input sensor including positional data
corresponding to the position of a mechanical interaction with said input sensor (106) and a second data type corresponding to the
absence of a mechanical interaction with said input sensor. The processing means (1202) is configured to generate data representing
a first character in response to processing an item of data of said second type followed by positional data corresponding to a first
position, and to generate data representing a different second character in response to processing positional data corresponding to a
different second position followed by an item of data of said second type.
